

AMBLYOPIA BY ANISOMETROPIA. A NEW THERAPEUTIC METHOD.
A. Torrado, R. Wong, G. Soto.
Medical and Surgical Research Center, Cuba.

Thirty adult patients with the diagnosis of amblyopia by anisometropia were studied. The majority of the patients had high ametropia, predominantly myopia. Ozone therapy was used, associated to the usual treatment of visual exercises and macular stimulation. The use of ozone associated to traditional methods produced a better and more effective response in the recovery of the patient visual acuity, as well as shortening the treatment.
