

**IMMUNOLOGICAL FINDINGS IN THE PERIPHERAL BLOOD AND IN THE SYNOVIAL FLUID AFTER
INTRAARTICULAR OZONE INJECTIONS IN RHEUMATOID ARTHRITIS.**

Augusta-Klinik, 55543 Bad Kreuznach, Germany.

The aim of this pilot study is to find the influence that O₂/O₃ exerts in the cytokines in peripheral blood and in synovial fluid. In this study we have two groups of classical rheumatoid arthritis. One group treated with O₂/O₃ (major haemotherapy and intraarticular O₂/O₃ injections), the other group without O₂/O₃. We find there are significant changes with O₂/O₃ (granulocytes and other cell population).
