

OZONE THERAPY IN THE TREATMENT OF OSTEOARTHRITIS.

B. Conde, M. Casas, M. Delgado, F. Ramos.

Camilo Cienfuegos Provincial Hospital Sancti Spiritus, Cuba.

We have been using ozone therapy, during 5 years, in 200 patients with different types of arthritis, for example: lumbar arthritis, generalized arthrosis, hiposteoarthritis, knee arthrosis. In our group of patients, 60 % female and 40 % of male were present (80 % with more than 40 years old). Three groups of treatment were considered: group I , using ozone therapy alone; group II, ozone therapy plus medication (antinflamatory and/or analgesics drugs) and group III, ozone therapy plus medication and physiotherapy. In general. 85 % of improvement was obtained.
