

OLEOZON IN GYNECOLOGY.

G. Morris, S. Menéndez¹.

Cira García Central Clinic, Cuba.

¹Ozone Research Center, Cuba.

As it has been tested the germicide power, "OLEOZON" (ozonized sunflower oil) is widely used in gynecological processes of microbial cause. It was applied daily, during 7 days, in 320 patients with micotic or bacterial Vulvovaginitis. We demonstrated its efficiency comparing the effects of this new medicament with the conventional ones, such as "Trivagin", "Nistatine", (tables or cream) "Canesten" and Chloranphenicol ovules. We carried out vaginal exudate initially and post-treatment with successful results with the group of patients treated with "OLEOZON". Any side-effect was report.
